

Action Herculan® IG Series

PROTECTIVE & DECORATIVE SYNTHETIC FLOOR SYSTEMS

Seamless, self-leveling surfaces that are affordable and environmentally friendly.

Action Herculan IG Series poured polyurethane surfaces provide a durable, aesthetic and easy-to-maintain option for many commercial, institutional and industrial applications. Seamless, nonporous, these surfaces are ideal for environments that must be clean and germ-free — from hospitals and clean rooms to schools and laboratories. Highly stain-resistant — ideal for retail stores, vehicle showrooms, convention facilities and even factories.

ACTION HERCULAN® IG SYNTHETIC SPORTS FLOORS

A tough, attractive surface that's easy on budgets and the environment.

Action Herculan IG Series polyurethane floor systems are made with non-toxic water-based, solvent-free materials, and contain no volatile organic compounds (VOCs) — no building evacuation is needed during installation. The superior elastic surface is easy to maintain, and highly resistant to wear, cracking and fissures found in conventional acrylic resurfacing products.

The perfect choice for multifunction facilities, these anti-slip floors can be applied over most existing flat surfaces; can handle heavy foot and vehicle traffic, chairs, tables and fixtures; and are reliable for use where food and liquids are present.

The sheer utility of these floors is combined with design flexibility — your choice of colors is virtually unlimited, a range of finishes is available (from rough-look to glossy), and different color accents and designs can be integrated, using Action Herculan paint.

East to Maintain.

Because Action Herculan IG Series floors are seamless and fully sealed, they are impermeable to moisture, making them

No harmful fumes, no building evacuation during installation.

Rugged surface resists wear from furniture and fixtures.

easy to clean, and inherently more hygienic than tiled or porous surfaces.

Action Herculan IG Series floors will retain their appearance far longer than other surfaces, and are easily and economically resurfaced (a minimum 10-year lifecycle can be expected, given regular, proper maintenance).
